## Partner Snapshot: BioPartner

**BioPartner is a Bionow Preferred Partner for discounted international conferences.**

International partnering events and tradeshows are a major source of business leads for companies expanding into new markets or looking for new collaborative partners. BioPartner UK negotiates entry fee discounts for UK companies attending many major international biopharma events.

In addition, BioPartner's UK Delegations and International Missions promote the UK presence at international conferences and they work with conference organisers, in-country agencies and overseas networks to provide the best business opportunities for UK companies travelling with the Delegation. Joining a BioPartner UK Delegation means you can attend as part of the UK Pavilion which acts as a highly visible and recognisable brand to draw in business in the competitive global market.

**Bionow Members and Premium Members can claim discounts at the BioPartner Alliance Member rate by registering at the BioPartner website or requesting a code.**

## Oncology & Precision Medicine Conference Alderley Park

**10th - 11th December**

Join Bionow, expert speakers and industry colleagues for the two-day Oncology & Precision Medicine Conference: explore the current oncology landscape on day one and the future of precision medicine on day two.

The development of more targeted and effective early-stage detection strategies is arguably the single most important and impactful objective we can have in improving cancer outcomes. Precision medicine is an innovative approach for tailoring disease treatment and prevention, making it possible for clinicians and researchers to more accurately predict which treatments are more likely to work. Bionow is pleased to present a two-day event to explore the relationship between these two areas of healthcare and facilitate a more in-depth programme, including talks, panel discussions, exhibition, poster presentations and networking opportunities.

### Global AMR challenge receives a £5m boost to drive diagnostics innovation

PACE (Pathways to Antimicrobial Clinical Efficacy) has launched its second funding round with up to £5 million available to support cutting-edge diagnostic projects. This funding is part of a broader £30 million investment to address the global challenge of antimicrobial resistance (AMR).

PACE is one of the UK's largest public-private initiatives targeting early-stage antimicrobial drug and diagnostic discovery. The pioneering partnership between LifeArc, Medicines Discovery Catapult (MDC) and Innovate UK is driving the development of new tests and treatments to tackle deadly AMR, which is predicted to kill 39.1 million people globally between 2025 and 2050.

## **New NHC Service launched to accelerate gene therapy development**

VecTUs has been created through the efforts of academic staff at the National Horizons Centre, Teesside University's national centre of excellence for bioscience and healthcare.

BioVectors are specially designed carriers used to deliver genetic material like DNA or RNA into cells. They are important in gene therapy as they can be used to safely transport and deliver genetic material to fix or replace faulty genes in a person's cells to treat or prevent diseases. Many of the academics involved in launching VecTUs have previously worked on developing gene therapies that are now in clinical testing.

## **Information**

Product and service information, blogs, funding rounds, reports and more from our Members and the wider life science sector

## What makes transfer pricing an important issue for growing life sciences businesses?

Building a successful life sciences business is a complex journey. It involves:

- Successfully conducting the research and development needed to build a strong and compelling product or service proposition.
- Developing a strong commercial model and market proposition.
- Navigating the regulatory environment – for example, through clinical trials and obtaining the right marketing authorisations.

All this usually needs to be achieved while managing tight funding constraints.

## Three reasons biotech businesses need a communications strategy

When you're running a biotech company, your to do list is never short. Whether you're midway through a study, procuring new lab equipment or trying to raise investment, there's never time to take a moment to breathe.

But sometimes, it's important to stop and think.

Building a communications strategy can seem like a low priority given everything else you have going on. I can already hear the cries of exasperation from people reading this: what's the point? Isn't it a waste of time? We're not in market yet and I'll never look at it anyway!

## Leveraging Big Data in Pharma: Envisioning Tomorrow

The pharmaceutical world has long turned to numbers and facts to figure out what works in medicine. The flood of information these days is way more than anyone could sort through alone. That's where "Big Data" comes in. It's an ocean of information that's deeper than we've ever seen and it's a goldmine for the pharma industry.

The power of today's computers to make sense of all this data is a truly astounding. From speeding up the research and development of new drugs to knowing what patients need before they do, Big Data could mean big things, estimated to bring in \$100 million for healthcare every year. Let's dive into how tapping into this resource could change the game for pharma companies everywhere.

## Morning Sickness: The Role of Drug Repurposing and Intellectual Property Considerations

Nausea and vomiting in pregnancy, often known as 'morning sickness', is experienced by up to 80% of pregnant women. Morning sickness is typically experienced in the first trimester with symptoms clearing up about week 20 (or longer in some cases) of pregnancy. It is unpleasant and can impact quality of life. Some pregnant women may be sick many times a day and unable to keep food or drink down. In very severe cases (such as those with hyperemesis gravidarum) this can lead to hospitalisation and can even be life-threatening.
